PROFESSIONAL EXPERIENCE

Techmentee Inc., Data Analyst II | Harrison, NJ

Jul 2025 - Present

- Assessed acquisition funnel efficiency for a user subscription platform by comparing paid and organic cohorts in SQL and Python, enabling budget reallocations that reduced cost per signup by 10%
- Diagnosed step-level drop-offs across six stages of the signup journey, prioritizing two data-backed experiment hypotheses that improved conversion significantly within one release cycle
- Institutionalized recurring business metrics used in weekly reviews, replacing one-off analyses and improving consistency of decision-making across product and marketing stakeholders

L.B. Foster Salient Systems, Data Scientist II | Dublin, OH

Dec 2024 - Jun 2025

- Built a scalable data pipeline using Python & PySpark on Databricks with Azure Blob Storage to process 3M+ high-speed sensor data, for automated wheel filtering, anomaly detection, poly curve analysis, & weight calculation
- Engineered a health metric using double differential filtering to eliminate 35% of jittery or defective wheels, enhancing predictive maintenance precision
- Implemented polynomial curve fitting and anomaly detection using K-means and statistical metrics to isolate sensor noise from true faults, uncovering 18% more electronic anomalies.
- Automated ADC-based sensor data validation for 16 circuits per rail, enhancing electronic signal integrity checks with a 40% reduction in misclassification

Norfolk Southern Corp, Data Science Intern | Atlanta, GA

Sep 2022 - Dec 2022

- Developed a data processing pipeline using Apache Spark to efficiently analyze over 90k rail-road intersections, reducing manual intervention by 40% and enhancing the speed of infrastructure planning decisions
- Optimized anomaly detection workflows with Elasticsearch, streamlining the identification of over 50 anomalies in a dataset of 30,000+ data points, thereby improving the overall accuracy of data integrity checks by 40%
- Reduced operational costs by 20% by identifying inefficiencies in freight distribution patterns using logistic regression & time series forecasting model in Amazon Redshift, streamlining operations

Accenture, Data Analyst II | India

Mar 2020 - Jul 2021

- Engineered a scalable data processing framework using Apache Spark to process insurance campaign data, resulting in a 5.5% increase in conversion rates through more accurate targeting and campaign adjustments
- Enhanced customer lapse detection and analysis by implementing SQL-based workflows, providing the Finance team with real-time insights into customer behavior and enabling more effective, data-driven pricing strategies
- Designed an event-driven data integration pipeline using AWS Step Functions and AWS Batch to coordinate ingestion and transformation tasks across systems, improving decision-making speed and accuracy by 12%
- Automated data cleaning and preprocessing workflows using Alteryx, streamlining ETL pipelines to enhance data quality and achieve a 25% reduction in manual processing time

Accenture, Data Analyst I | India

Jan 2018 - Mar 2020

- Established a real-time forecasting system utilizing AWS Athena, which processed over 250k records and enabled faster trend identification, leading to a gross margin increase of 8% through more responsive market strategies

- Collaborated with cross-functional teams to implement a data lake architecture using AWS S3 in combination with AWS Glue and Athena, improving catalog management efficiency by 25% through enhanced data accessibility
- Deployed a cloud-based data warehouse solution using Google BigQuery for healthcare analytics, allowing real-time analysis of performance data and improving the identification of key biomarkers in product performance assessments

ACADEMIC PROJECTS

Strategic Analysis of Hospitality Data | EDA, Classification, Time Series Analysis

- Employed SVM, Logistic Regression, and XGBoost to achieve high accuracy and performance in analyzing Expedia hotel data, complemented by in-depth EDA focusing on Average Daily Rate and cancellation trends using ARIMA

Topic Modeling - News Data | USML, Clustering

- Achieved an impressive coherence value of 0.68 across 14 well-defined topics by utilizing advanced techniques, including LDA, LSA, K-means clustering, and NMF alongside TF-IDF vectorization

MapReduce to Compute Relative Frequency

- Engineered and implemented a scalable MapReduce solution within the Hadoop ecosystem to calculate and sort the relative frequencies of individual words and 100-word pairs across a corpus of 10,000 Wikipedia documents

SKILLS

Programming Languages & Tools: Python (NumPy, Pandas, PySpark), SQL, Java, Databricks, Git, Bitbucket, JIRA, Linux

Databases & Cloud Technologies: SQL, PostgreSQL, MySQL, MongoDB, AWS EC2, AWS S3

Data Science & AI: Predictive Analytics, Machine Learning, Time Series Analysis & Forecasting (ARIMA), LLM

Data Engineering & ETL: ETL pipeline design, Data processing & feature engineering, Data quality validation, Apache Spark, Apache Kafka, Apache NiFi, Apache Hive, Google BigQuery, Redshift

Data Processing & Integration: ETL, Data Warehousing, Real-time Data Streaming, Data Pipelines, Data Lakes, Data Ingestion, Data Transformation, Alteryx

Big Data Technologies: Hadoop, Elasticsearch, Apache Airflow, Azure Blob

EDUCATION

Master of Science, MS in Data Science

Sep 2021 - Dec 2023

Northeastern University, Boston, MA
