PROFESSIONAL EXPERIENCE

Techmentee Inc. , Sr. Data Analyst | Harrison, NJ

Jul 2025 – Current

- Cleaned and processed multi-year datasets in Python, performing descriptive statistics and time-trend analyses that informed 8+ stakeholder discussions and were incorporated into draft briefs and presentation materials
- Extracted and organized ACS and CPS survey data covering 50+ variables across 6–8 survey years, producing state and sub-state tabulations aggregated by gender, age group, and race to support labor and health analyses
- Built and maintained interactive Power BI dashboards used for recurring reporting, geography-based visuals that enabled faster comparison of trends and reduced follow-up requests from several days to under 1 day
- Authored documentation and metadata for 50+ indicators, outlining definitions, calculation logic, and update notes, improving refresh consistency and reducing clarification follow-ups by ~25% during reporting cycles

L.B. Foster Salient Systems, Data Scientist II | Dublin, OH

Dec 2024 – Jun 2025

- Built a scalable data pipeline using Python & PySpark on Databricks with Azure Blob Storage to process 3M+ high-speed sensor data, enabling automated wheel filtering, anomaly detection, polynomial curve analysis, and weight calculation
- Developed a wheel health metric using double differential filtering and polynomial curve fitting with K-means, filtering out 35% of jittery wheels, detecting 18% more true electronic anomalies, boosting predictive accuracy
- Partnered with railway clients, operations teams, and engineering leads to gather requirements and deliver custom Power BI dashboards integrated with SQL queries from Databricks for maintenance KPIs
- Automated ADC-based sensor data validation across 16 circuits per rail, strengthening electronic signal integrity and reducing misclassification by 40%
- Performed advanced EDA in Python and PySpark on Databricks to identify trends and anomalies in high-speed sensor data, enabling optimized maintenance scheduling

Norfolk Southern Corp, Data Science Intern | Atlanta, GA

Sep 2022 – Dec 2022

- Applied K-Nearest Neighbors, PCA, and K-Means clustering to enhance spatial analysis of 90k+ rail-road intersections, advancing infrastructure planning accuracy
- Streamlined EDA using Pandas, NumPy, and Matplotlib to identify 50+ anomalies across 30k+ records, improving clustering accuracy by 40%
- Reduced operational costs by 20% by identifying inefficiencies in freight distribution using logistic regression and time-series forecasting with Amazon Redshift
- Built anomaly detection pipelines using Apache Spark and MLlib, improving railway operations reliability and logistical precision by 40%

Accenture, Data Analyst II | India

Mar 2020 – Jul 2021

- Architected ML-driven data pipelines using Apache Spark for insurance campaign response analysis, improving conversion rates by 5.5%
- Performed lapse and retention risk assessments using Python with gradient boosting and SQL-based segmentation, reducing early-lapse rates by 15%
- Improved quarterly risk assessment accuracy by 12% using gradient boosting models on demographic and historical claim data

- Automated data cleaning and preprocessing workflows using Alteryx, reducing manual processing time by 25%
- Conducted portfolio exposure analysis using Python, SQL, and Tableau to inform pricing and risk mitigation strategies

Accenture, Data Analyst I | India

Jan 2018 – Mar 2020

- Improved catalog management efficiency using SQL, increasing productivity by 25% and strengthening cross-functional quality processes
- Developed ARIMA-based forecasting models on 250k+ therapy utilization records, improving access planning accuracy by 8%
- Identified cardiovascular biomarkers using Python statistical analysis and Tableau visualizations, improving early-risk detection accuracy by 14% across 12k+ patient records
- Built Python-based validation frameworks for clinical trial records, reducing compliance review time by 35% and improving QA scores by 20%
- Analyzed large-scale clinical and real-world datasets using Python, SQL, and Databricks, improving early risk detection by 10%

ACADEMIC PROJECTS

Healthcare Bot | LLM, CUDA

- Implemented HealthBot with FLAN-T5, GPT-2, LSTM, and BERT for enhanced intent recognition and entity detection, integrating user feedback to boost diagnostic accuracy and response

Strategic Analysis of Hospitality Data | EDA, Classification, Time Series Analysis

- Applied SVM, Logistic Regression, and XGBoost to analyze Expedia hotel data, supported by ARIMA-based trend analysis on ADR and cancellation patterns

Topic Modeling – News Data | USML, Clustering

- Achieved a coherence score of 0.68 across 14 topics using LDA, LSA, K-Means, NMF, and TF-IDF vectorization

SKILLS

Programming Languages & Frameworks: Python (NumPy, Pandas, Scikit-Learn), R, PySpark, Java (REST APIs), Git, Bitbucket, JIRA, Linux (UNIX)

Databases & Cloud Technologies: SQL, PostgreSQL, MySQL, MongoDB, Apache Spark, AWS EC2, AWS S3, Hadoop, Redshift

Data Analytics & Reporting: Predictive analytics, ETL, feature engineering, supervised and unsupervised ML, NLP, probability and statistics, hypothesis testing, time-series forecasting (ARIMA), Alteryx, Databricks

Data Visualization & Tools: Tableau, Excel, Matplotlib, Seaborn, Power BI, Databricks

EDUCATION

Master of Science, MS in Data Science

Sep 2021 – Dec 2023

Northeastern University, Boston, MA
