PROFESSIONAL EXPERIENCE

Techmentee Inc. , Data Analyst | Harrison, NJ

Jul 2025 – Current

- Assessed acquisition funnel efficiency for a user subscription platform by comparing paid and organic cohorts in SQL and Python, enabling budget reallocations that reduced cost per signup by 10%
- Diagnosed step-level drop-offs across six stages of the signup journey, prioritizing two data-backed experiment hypotheses that improved conversion significantly within one release cycle.
- Institutionalized recurring business metrics used in weekly reviews, replacing one-off analyses and improving consistency of decision-making across product and marketing stakeholders

L.B. Foster Salient Systems, Data Scientist II | Dublin, OH

Dec 2024 – Jun 2025

- Built a scalable data pipeline using Python & PySpark on Databricks with Azure Blob Storage to process 3M+ high-speed sensor data, enabling automated wheel filtering, anomaly detection, poly curve analysis, & weight calculation
- Developed a wheel health metric using double differential filtering and polynomial curve fitting with K-means to filter out 35% of jittery wheels and detect 18% more true electronic anomalies, boosting predictive accuracy
- Engineered SQL data models and Power BI reports to visualize wheel diagnostics, anomaly patterns, and predictive health metrics, improving transparency for cross-functional teams and facilitating informed maintenance planning
- Automated ADC-based sensor data validation across 16 circuits per rail, enhancing electronic signal integrity and strengthening anomaly isolation and wheel health diagnostics by reducing misclassification by 40%

Norfolk Southern Corp, Data Science Intern | Atlanta, GA

Sep 2022 – Dec 2022

- Consolidated and cleaned 90k+ operational and billing records in PostgreSQL and Python, removing 15% duplicate entries and providing a reliable foundation for risk policy evaluation and compliance testing
- Performed exploratory analysis on 30k+ case review and claims transactions, surfacing 50+ anomalies that strengthened manual review effectiveness and boosted risk signal reliability by 40%
- Built Tableau dashboards to track agent productivity KPIs, review turnaround times, and dispute outcomes, enabling leadership to measure policy efficiency and cut backlog by 18%
- Designed automated SQL and Python validation scripts to flag suspicious freight invoices, duplicate debits, and noncompliant payroll entries, improving fraud detection coverage and reducing investigation cycle times by 10 hours weekly

Accenture, Data Analyst II | India

Mar 2020 – Jul 2021

- Architected a data pipeline using supervised ML models and Apache Spark for insurance campaign response studies, enhancing conversion rates by 5.5% through customized campaigns
- Drove lapse and retention risk assessments using Python (gradient boosting) and customer segmentation with SQL, uncovering key drivers of early terminations that informed policy changes, reduced early-lapse rates 15%
- Improved quarterly risk assessment accuracy by 12% by implementing a gradient boosting model that predicts policyholder default probabilities, using demographic & historical claim data to refine risk mitigation strategies
- Automated data cleaning and preprocessing workflows using Alteryx, streamlining ETL pipelines to enhance data quality and achieve a 25% reduction in manual processing time

- Conducted portfolio exposure analysis using Python for scenario modeling, SQL for data aggregation, & Tableau for risk visualization, informing pricing and design changes that improved profitability by 10% and reduced lapse risk by 12%

Accenture, Data Analyst I | India

Jan 2018 – Mar 2020

- Collaborated on a catalog management efficiency project using SQL, boosting productivity by 25%, orchestrated a quality framework with cross-functional teams, enhancing efficiency by 15%
- Developed ARIMA-based time series forecasting models on 250k+ longitudinal therapy utilization records, enabling early signal detection of seasonal demand fluctuations and improving patient access by 8% through optimized resource allocation
- Deduced key cardiovascular biomarkers in product performance assessments using Python and Tableau, leveraging Azure Blob storage and Databricks for data, improving early-risk detection accuracy by 14% across 12k+ patient records
- Built Python-based validation frameworks to cross-check trial records against regulatory and protocol standards, reducing compliance review time by 35% and improving quality assurance scores by 20%
- Manipulated and analyzed large-scale clinical and real-world datasets (trial records, biomarker studies) using Python, SQL, and Databricks, ensuring compliance with regulatory standards and improving early risk detection by 10%

ACADEMIC PROJECTS

Strategic Analysis of Hospitality Data | EDA, Classification, Time Series Analysis

- Employed SVM, Logistic Regression, and XGBoost to achieve high accuracy and performance in analyzing Expedia hotel data, complemented by in-depth EDA focusing on Average Daily Rate and cancellation trends using ARIMA

Topic Modeling - News Data | USML, Clustering

- Achieved an impressive coherence value of 0.68 across 14 well-defined topics by utilizing advanced techniques, including LDA, LSA, K-means clustering, and NMF alongside TF-IDF vectorization

SKILLS

Programming Languages & Frameworks: Python (NumPy, Pandas, Scikit-Learn), R, PySpark, Java (REST APIs), Git, Bitbucket, JIRA, Linux (UNIX)

Databases & Cloud Technologies: SQL, PostgreSQL, MySQL, MongoDB, Apache Spark, Azure, Hadoop, Redshift, Azure Data Factory (ADF)

Data Analytics & Reporting: Predictive Analytics, ETL, Data Processing, Feature Engineering & Selection, Machine Learning (Supervised/Unsupervised), NLP, Probability & Statistics, Hypothesis Testing, Time Series Analysis & Forecasting (ARIMA), Alteryx, Databricks

Data Visualization & Tools: Tableau, Excel, Matplotlib, Seaborn, Power BI (DAX, Power Query, Data Modeling), Databricks

EDUCATION

Master of Science, MS in Data Science

Sep 2021 – Dec 2023

Northeastern University, Boston, MA
